For more information on the Providence Hospital Neurological Rehabilitation Program please contact Providence Hospital Rehab Services at (251) 633-1440.
Providence Hospital Neurological Rehabilitation Outpatient Services provide an individualized program for people with neurological disorders or who have lost function due to a long term illness.

The team will evaluate the patient to determine functional limitation or weakness. The team works closely with the patient, family/caregiver, and the physician.

Services include Occupational Therapy, Physical Therapy, and Speech Therapy.

Speech Therapy
Speech Therapy concentrates on swallowing function, communication, and thinking. The patient may need help restoring his/her swallow. They may also need help with understanding spoken language, expressing themselves through speech and language, as well as, improving thought organization and problem solving.

Physical Therapy
Physical Therapy concentrates on strengthening, balance and coordination to enhance function and reduce the risk of falls. Patients receive a one-on-one evaluation, and treatment programs are individualized to meet their specific needs.

Occupational Therapy
Occupational Therapy concentrates on upper body strengthening, fine motor skills, and activities of daily living such as getting dressed, preparing a meal, eating, and hand writing. They also work on thinking skills like preparing a grocery list or following a recipe.
